

SACCOS Plus

Microfinance Institutions, formal and informal, including SACCOS groups are very complex institutions with a myriad of business operations that need a high level of seamless information and communication between each other to achieve maximum managerial level supervision and control.

The traditional methods have proven to be quite insufficient approach towards managing microfinances. The manual approaches have shown to involve a tremendous amount of paperwork, long throughput time, poor communication approaches, increased expenses and many more.

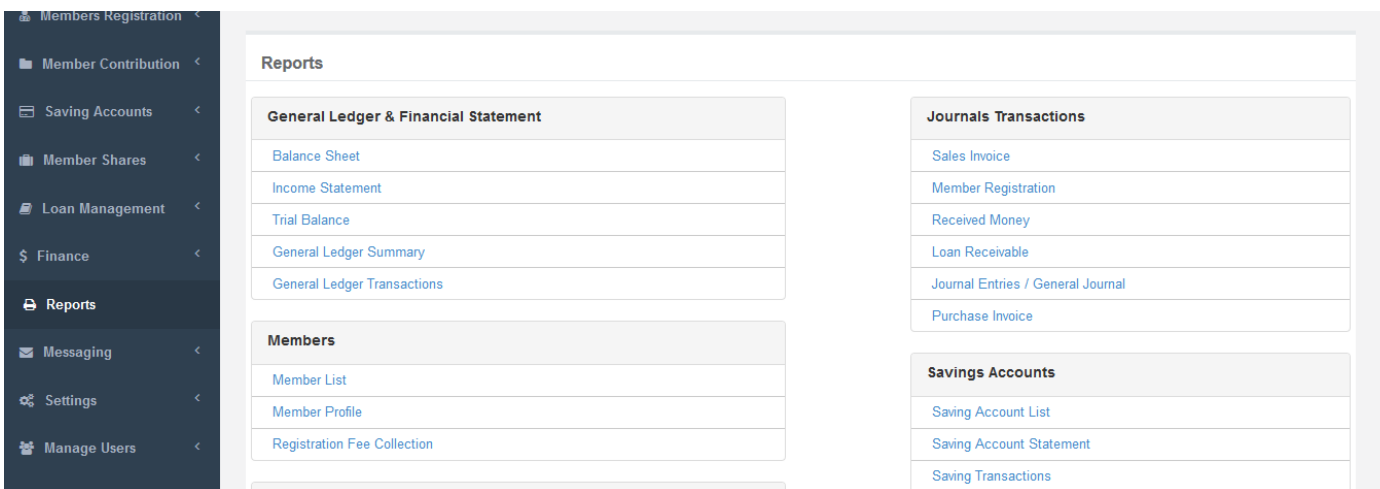

Among the reasons as to why Microfinance companies claim to stick to Excel and other manual approaches is the resistance to change. Most of the times, managers are aware or unaware that they can be losing a lot of resources through the conventional approaches towards managing the transaction happening in the institution.

Microfinance Institutions require a well-organized approach towards management of information and ability to access to purposive reports when needed

SACCOS Plus, an application developed by DataVision International captures all the mandatory business processes in Microfinance and SACCOS groups.

The application can assist in efficient data and information management, loan management and other critical functionalities found under these institutions.

With the chart of accounts capability, SaccosPlus offers the clients an independent solution which by providing a full range of the cooperative group without depending on supporting solutions or extra manual calculations

SACCOS Plus gives institutions the power to know the performance at a given point of time by pulling the reports attributes that are part of the institution's Key Performance Indicators (KPIs).

SACCOS Plus helps institutions overcome the obstacles caused by tradition operational methods which lead to inefficiency and inaccuracy. SACCOS Plus is intuitive, easy to use and can be deployed in any industry apart from Microfinance and Loan Institutions.
